

Fivetran connectors free you to focus on insights, instead of fixing data leaks.

Data Pipelines, Reinvented.

Set up a pre-built, fully automated connector in five minutes and replicate your applications, databases, events and files into the cloud warehouse of your choice. Our ready-to-query schemas enable instant analysis via your favorite BI tool, and we own all maintenance. Incremental batch updates and automatic schema migrations minimize disruptions, and you can always add new data sources — no coding required.

Empower your business to make fully informed data decisions.
For a free trial, contact sales@fivetran.com.

Fivetran connectors deliver ready-to-query schemas for instant analytics.

The Modern Analytics Architecture

Load everything into the data warehouse of your choice.

We support loading into these warehouses, and more:

- Amazon Redshift
- Azure SQL Data Warehouse
- Google BigQuery
- Snowflake

What our customers say.

“If we hadn’t switched to Fivetran, we would still be building connections from scratch instead of understanding our business operations data.”

- Olve Grolle, Director of Business Systems, Urban Airship

“Most of the ETL tools we looked at required hideously complex configurations, but Fivetran was easy to set up and produced well-designed target schemas. Now we have all our disparate sources in a format that makes analytics easy.”

- Jeff Cobb, VP of Product, LiveStories

Fivetran has been a massive accelerant to getting data insights.

- Ernest Wong, Product Manager, Talkdesk

When you’re able to relieve yourself of the pressure of ongoing maintenance overhead of data plumbing, you can be so much more impactful to the organization.”

- Guli Zhu, Head of Marketing Analytics at Square

“In total, we’re saving 140 hours of manual reporting time each week. The return on investment was double what we’d spent.”

- Jim Shedlick, Director of Architecture at Label Insight

Custom data sources?

Use our cloud function connectors.

If you’re pulling from obscure sources or using custom APIs, our cloud function connectors help limit your engineering burden.

We support cloud functions for serverless platforms:

- AWS Lambda
- Google Cloud Functions
- Azure Functions
